

The Operating System for Business

What's in the box?

How Zoho One transforms the way you run your business?

Legacy Tech

- Multi-vendor solution
- Disparate IT software
- On-premise software
- Inflexible infrastructure
- Complex pricing

Zoho One

- One-stop solution
- Integrated solutions
- Cloud technology
- Scalable technology stack
- Simple pricing

Comprehensive. Tightly Integrated.

Don't grapple with multiple vendors leading to multiple subscription cycles and tiresome integrations. Zoho One has over 45+ applications to help you multiply the ROI for your business. Manage your marketing, sales, finance, human resources, operations, and much more with these easy-to-use, unified apps.

Smart. Constantly Evolving.

Zoho One brings enterprise-grade technology at an extremely affordable price point. System-wide services like AI, BI, messaging, search, SSO, provisioning and telephony span across all the 45+ apps. With Zia, our AI assistant, you can discover powerful ways to maximize business results. Get insights from the Analytics Dashboard to achieve your business goals and foster better collaboration in your workplace through the Cliq chat bar. You can even make your work simpler by adding feature-rich solutions from the One Marketplace and set up SSO to log into multiple business accounts at the same time.

Secure. Always reliable.

More than 50 million users globally use Zoho to run their businesses. Solopreneurs, small and medium businesses, and large enterprises rely on Zoho's security and data protection to work in a safe environment in the cloud. We have deployed state-of-the-art technologies and put in action stringent policies to ensure your data is secure. We clock a service uptime of over 99.9%.

Customizable. Ultra flexible.

Zoho One offers businesses the flexibility to customize solutions to fit their needs by providing solutions across the developer spectrum. For those who can't code and want to create business workflows - there is Orchestly. For those who want to create an app with minimal coding - there is Zoho Creator. And for the pro-coder who wants to build and deploy apps and micro services at scale without worrying about DevOps, there is Catalyst. You also have Zoho Flow to create integrations with external software.
