cargoNET
## the AIO CEP-solution

MORE EFFICIENCY FOR EXPRESS AND PARCEL SERVICES

cargoNET is a turnkey transport logistics system for express and parcel services.
The all-in-one solution covers all core processes and is designed for cost-efficient handling of parcels in medium-sized to large networks - with a volume of at least five million parcels per year.

cargoNET supports the whole life cycle of your parcels – from creation to delivery

▶ Integrated complete solution for B2B and B2C CEP-providers.

▶ Focus on the specific processes of parcel services with high parcel volumes.

▶ High level of process automation and support of the complete logistics chain to ensure efficient processes.

▶ High operating performance and stability.

▶ Cost effective handling of medium to high parcel volume.

▶ Functions cover all main organizational units of both B2B and B2C parcel services: Operations, Sales, Finance, Customer Service, plus Customer Automation Systems and Web applications/services.

▶ Complementary web-services for geocoding, area planning, tour optimization, ETA.

▶ Over 30 years of experience - developed by Axians ICT Austria (Linz) since 1994.

|			
7 customers in 7 countries	120+ locations/ centers use cargoNET	Processed ~13 million parcels per month ~120 million parcels per year	>1.2 billion parcels processed in total

Ongoing Operations: Ongoing SERVICES

Express and parcel services have specific expectations regarding logistics systems. These expectations must be considered when developing a truly tailored solution – which is exactly what Axians ICT Austria delivers. Our services are designed to meet the typical needs of this business sector.

Support ✓
2nd and 3rd level support available as needed.

Operations ✓
IT infrastructure operation (servers and client PCs).

Development ✓
Ongoing software development based on individual customer requests.

Maintenance ✓
Software maintenance: development of new functionalities and adaptation to new base technologies.

cargoNET – further features making the difference

▶ **Customer automation systems**
different integrated solutions allow you to receive the parcel data from your customers (webservices, station.net – customer client solution, e-print, mixed I-point center application)

▶ **Invoicing**
Creation and shipment of invoices, interfaces to finance & controlling

▶ **Support for Multibarcode**
cargoNET is capable to support different barcode-systems.

Customers may transfer their own Barcode as shipping identification (all barcodes must be unique). Support for standards like GS1 or MH10.

▶ **Mobile solution – cargoNET on Tour**
Android based mobile solution preparing all tour data to the driver. Supporting pick-up orders, safe place delivery, pay on delivery and route optimization.

▶ **Web services for integration in your own applications**
track & trace, pick-up orders, e-shipping, proof of delivery.

cargoNET digitalization and optimization services

The **digitalization and optimization of processes** help in solving the current challenges of the CEP industry as well as meeting customer expectations. In the CEP environment, the focus is set clearly **on efficient route planning and route optimization.**

cargoNET offers all necessary services like **area planning, geo-coding, tour/route optimization and ETA calculation.** For details see: **"Axians addHelix4CEP".**
